

# The Classic Safety Surfacing Solution

## The Classic Safety Surfacing Solution

Wet pour is the classic surfacing solution for play areas and RubbaSmart from PlaySmart is a high quality wet pour solution. Available in a range of colours and in a range of thicknesses, RubbaSmart can be used to brighten up any playground whether you want use solid colour or incorporate crazy designs. Contact us today!

## RubbaSmart

RubbaSmart is an impact absorbing safety surface for playgrounds and play areas. It uses a polyurethane/ rubber composite mixed on site and wet poured in place to give a durable, low maintenance play surface. Available in a wide range of colours, RubbaSmart is an ideal solution for simple and complex designs alike and PlaySmart will be happy to support you from design and layout to installation and aftercare.

## Accident Smart

Although often specified for aesthetic reasons, RubbaSmart is, above all, a safety surface and can be specified at varying thicknesses in order to provide a range of Critical Fall Heights from 20mm (0.7m CFH) to 130mm (3.0m CFH). In some cases, such as where the sub base is type 1 MOT stone, we recommend a minimum thickness of 40mm.

## Environmentally Smart

Environmental responsibility is very important to PlaySmart; many of our products are recycled or recyclable and, as a company, we operate in an environmentally conscious way. The base surfaces for RubbaSmart use recycled rubber crumb which is an ideal base for an impact absorbing surface. The crumb is sourced from old tyres which reduces the amount of virgin resources used and also diverts rubber tyre waste from going to landfill.

## Installation Smart

RubbaSmart can be installed on top of existing surfaces such as concrete, tarmac or flags or we can install a sub-base in open textured macadam or type 1 MOT stone. Installing over existing surfaces can eliminate the need for groundworks but it needs to be in reasonably good condition and will need drainage holes to be drilled across the surface. Where a sub base is to be installed, open textured macadam can be used for surfaces between 20 and 30mm but type 1 MOT stone should be used for surfaces of 40mm or thicker. In all instances, we will install an EPDM upper layer to give desired design.

## Access Smart

Unlike some safety surfaces, RubbaSmart is a continuous, unitary surface which will provide easy access for all users. It can be installed without the need for raised surfaces so, when moving from external areas on to the safety surface, there will be no noticeable change in height levels and no trip edges giving easy access to both wheelchair and pushchair users.

## Maintenance Smart

Unlike loose fill surfaces, RubbaSmart stays in place as the rubber forms a solid surface. It is vandal resistant and can be swept regularly to remove any debris. It is low maintenance with only occasional sweeping or hosing down needed as required to remove debris, grime or moss. In the unfortunate event that the surface becomes damaged, we can provide repair kits – we can also provide a repair service.

## Value Smart

Not only does RubbaSmart tick all the boxes in terms of safety and aesthetics, it offers great value too. It is a cost effective alternative to surfaces such as loose fill and, as it is durable and low maintenance, costs for replacement and ongoing upkeep are also low.

**As a result, specifying RubbaSmart leaves a greater proportion of project budgets available for spending on equipment and other items.**

## Testimonials

“I would just like to say what a fantastic job your company has done with our play area, your team of installers were very professional and it was nice to see them take pride in their work. It has transformed the play area and parents I have spoken to love the surface as it keeps the children clean and more importantly protects them from any serious injury.”

“I would have no hesitation in recommending PlaySmart and I look forward to working with you in future.”

### South Norfolk Council

“I would like to put on record my sincere thanks for your company’s swift and efficient service in replacing the damaged matting prior to our official opening of the Lickey Hills Play Boulder. I understand your staff travelled a considerable distance yet carried out the repair with no fuss within a day.”

“The opening by the Lord Mayor went well. Everything was good as new on the day (and is still in excellent condition one month on). All concerned were very impressed with the service received.”
