

Install Method

Hybrid Grass can be installed on an existing lawn, a newly-sown lawn, or turf. Hybrid grass should be rolled out covering the area ensuring minimal waste and then seams are sewn together using the provided needle and thread. The Hybrid Grass is then pegged into place with the biodegradable pegs and recessed in at the edges. Top dress and seed the area post install for enhanced performance and for the best results keep off the area until the first two cuts are complete.

Product Description

Hybrid Grass Innovative product combines the best of both worlds of natural and artificial grass. Provides long durability and the best cosmetic result for sporting areas, playgrounds, gardens and more. Designed with biodegradable materials. Requires no major construction works unless specified and easy to install. Open knitted hybrid net backing allows the natural grass to grow and blend with the artificial grass. Protect the existing natural grass to give it the best possible growing conditions. SmartPlay - The 30mm shock pad has a critical fall height up to a full 2.5m and is certified to EN1177.
